EESUN MOON

eesun.moon@columbia.edu | LinkedIn | GitHub | NY, United States

EDUCATION

Columbia University New York, NY
MS in Computer Science, GPA: 3.92/4.0 Expected Dec 2025
- Courses: Applied Machine Learning, Natural Language Processing, Spoken Language Processing, Computer Vision, Database

Sejong University Seoul, South Korea
BS in Intelligent Mechatronics Engineering, BE in Data Science, GPA: 4.4/4.5 Feb 2024
- Courses: Artificial Intelligence, Computer Networks, Operating Systems, Image Processing, Data Structures, Web Programming
- Teaching Assistant: Algorithms using C programming, Python fundamentals

TECHNICAL SKILLS

Programming & Databases	Python, C, R, Java | MySQL, PostgreSQL, MongoDB
Machine Learning Frameworks	TensorFlow, Keras, PyTorch, Scikit-Learn, Hugging Face, OpenAI, LangChain
Development & Cloud	Git, Docker, Linux (Ubuntu), FastAPI, Flask, Cloud Deployment (AWS, GCP)
Hardware & Data Tools	GPU, NPU, ONNX | Pandas, NumPy, Selenium, Matplotlib

PROFESSIONAL EXPERIENCE

Samsung Research America Mountain View, CA
AI Algorithm/NPU Simulator Research Scientist Jun 2025 – Expected Aug 2025

Humaner: Human-centered AI Software Development [GitHub] Seoul, South Korea
Machine Learning Engineer Mar 2024 – May 2024
- Built and deployed Q&A-based support message generator for soccer players using OpenAI and LangChain on Dockerized AWS EC2, enabling real-time interaction with 500+ live users and increasing **satisfaction by 20%**
- Tuned prompts based on post-deployment survey feedback to improve message relevance and personalization

Sejong University, Mobile Intelligent Embedded System Laboratory [GitHub] Seoul, South Korea
Research Assistant Sep 2021 – Mar 2024
- Led multimodal emotion recognition project for on-device AI using TensorFlow and MongoDB on Linux for government initiatives
- Optimized Keras-based deep models with score-based fusion of multimodal signals (heart rate, EEG, speech, image), achieving **99.68% classification accuracy** without increasing network complexity
- Deployed ONNX models on MLA100 NPU, reducing **power consumption by 3.12x** and **latency by 1.48x** for edge deployment
- Published papers in **IEEE** (Institute of Electrical and Electronics Engineers) [1] and **NCAA** (Neural Computing and Applications) [2] and demonstrated live deployment at **KIST** (Korea Institute of Science and Technology)

PROJECTS

Sentence Embedding Analysis in LLMs [GitHub] Jan 2025 – May 2025
- Analyzed embedding interpretability in LLMs through Zipf-like cluster distributions, demonstrating intermediate layers form more structured groupings, with slopes steepening from -0.87 to -1.42 as domain specificity increased
- Evaluated clustering reliability using Hugging Face Transformers, PyTorch, and scikit-learn, finding intermediate-layer and domain-specific embeddings yield more coherent clusters

CS Advising Assistant Chatbot with LLM, RAG, and Agentic Flow [GitHub] Jan 2025 – May 2025
- Developed chatbot with local inference via DeepSeek on Ollama to **eliminate LLM API costs** and deployed on GCP for production
- Optimized RAG pipeline with LangChain and MCP server, integrating Agentic Flow for multi-step retrieval and tool-based reasoning

Ranking-Based Spam Filtering on Social Networking Services [GitHub] Mar 2022 – Jun 2022
- Spearheaded project to prioritize organic user posts over likely ads from social media, earning **1st place** in graduation competition
- Automated data collection with Selenium and implemented unsupervised clustering with cosine similarity-based ranking, achieving **0.8 intra-cluster similarity** as coherence indicator
